

Silicon Solar Inc
Innovative Solar Solutions™

Our Mission:

At Silicon Solar, we aim to build a sustainable future for our global community. In today's high-energy consuming world, we offer world-class solar energy and renewable products, striving to meet the increasing need for alternative energy sources.

Our operational excellence and product leadership in the solar energy industry has enabled us to pioneer the development and distribution of new solar technologies and services. From the design room to product installation, the goal of our team is to provide an educational network and value chain, with customer service as our number one priority.

Photovoltaic Solar Electric System

Our forward-thinking model includes the establishment of multinational offices to better serve emerging markets and developing nations around the world. At Silicon Solar, we work to build and maintain a cleaner, energy-efficient world one satisfied customer at a time.

At Silicon Solar our mission is to:

- Help build a sustainable future for the global economy
- Offer world-class solar energy products
- Pioneer the development and distribution of new solar energy technologies.
- Provide a educational network for our customers

“Innovating today’s solar technologies for the future of tomorrow.”

At Silicon Solar we lay great value on stable, long term and mutually beneficial partnerships with our customer base ranging from homeowners to government affiliations. We provide experience and dedication in all our product categories.

Silicon Solar testing facilities were founded in 1997, where our primary focus is searching for products that are the Best of their kind. There are so many product choices in the marketplace, and Silicon Solar makes buying decisions easier. We engineer and use our own professional expertise and laboratories.

About Us:

The original idea of marketing solar energy products started when working with a Earth Science Regents product in the state of New York. The regent's project allows students to choose from a large number of topics including solar heating.

After selecting the solar heating topic, I became interested in the processes of solar energy, and its practical use in thermal heating applications. The thought of marketing solar energy items aroused from both my natural entrepreneurial tendencies and entrepreneurial environment.

Once fully involved in solar energy products, we started focusing on designing different applications for solar energy products. After spending a full summer of casual "research & development," it was understood that we have development applications where solar energy was not currently being used, or areas that had not yet been fully developed.

Furthermore, the starting capital used came from my personal savings, and amount of \$800. This money was earned during summer time jobs and lawn moving services.

In August of 1999, Silicon Solar LLC was founded in the State of New York establishing Matt & Adam Farrell as the owners of the corporation. Since our incorporation, we have established offices in Bainbridge, NY; Vista, CA; Xiamen, China. We plan to continue expanding our facilities into Florida, Texas, North Carolina, Australia, and Europe.

Manufacturing Facility:

Silicon Solar engineers and manufactures a complete line of solar energy products at their two manufacturing facilities in Xiamen, China and Bainbridge, NY. Using the latest industry technology, Silicon Solar's R & D team is constantly innovating new ways to incorporate solar energy products and other renewable energies into useful applications.

Our manufacturing facility in Xiamen is accompanied with several technicians and electrical engineers in addition to a full marketing staff. Maintaining ISO-9000 and 14000 certifications, our facilities are equipped with quality controls and safety systems.
