PRODUCT DESIGN

Discover. Develop. Deliver.

Let us help you discover ways you can incorporate sustainable solar technology into your current product!

We can improve the quality of your product **and** cut costs while seamlessly integrating your product's unique manufacturing with a reliable, high-tech solar system.

Whether it's building a prototype or delivering a turn-key manufacturing solution, our design teams will go the extra mile to bring your invention to life.

1

RESEARCH AND DEVELOPMENT

Together with your team, we will prepare comprehensive R&D analysis for your renewable energy project.

2

BUDGETING AND CONSULTING

Our team will help you identify costs associated with development, sourcing, and manufacturing to keep your project cost-effective.

3

CONSTRUCTION

We will prepare a construction roadmap for your project, ensuring your manufacturing and development partners exceed your expectations for your final product.

PRODUCT ENGINEERING

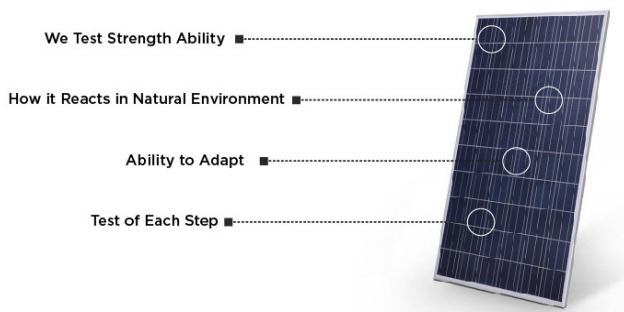

PRODUCT TESTING

Proven. Effective. Reliable.

Can your new solar product withstand day-to-day wear and tear?

It's important that your product meets local regulation and standards for performance and safety and displays the ability to withstand outdoor or harsh environments after installation.

Our testing equipment is capable of testing for thermal shock, vibration, impact, UV rays, UL compliance, and electrical performance.
